

INFORMATION SECURITY POLICY

Purpose

Information is one of the most critical assets for Bit2Me, so it is essential to implement a series of measures in all places where it is stored, transmitted or processed. The purpose of Bit2Me's Information Security Policy is to ensure the confidentiality, integrity and availability of data in order to comply with the obligations and best practices regarding information security in the development of its activities.

Principles

Bit2me's information security policy will be developed, in general, according to the following principles:

- **Principle of confidentiality:** the assets pertaining to information technology must be accessible only to those users, bodies and entities or processes expressly authorized to do so, with respect to the obligations of secrecy and professional confidentiality.
- **Principle of integrity and quality:** the integrity and quality of the information, as well as its treatment processes, must be guaranteed, establishing mechanisms to ensure that the processes of creation, treatment, storage and distribution of the information contribute to preserving its accuracy and correctness.
- **Principle of availability and continuity:** a high level of availability of IT assets will be guaranteed and the necessary plans and measures will be put in place to ensure the continuity of services and recovery in the event of serious contingencies.
- **Principle of risk management:** a continuous process of risk analysis and treatment should be articulated as a mechanism for managing the security of IT assets.
- **Principle of continuous improvement:** the effectiveness level of the information security controls in place will be reviewed in order to adapt them to the constant evolution of risks and technological environment.

All personnel working on behalf of Bit2Me must understand and comply with these principles, and the security policies that develop them. Bit2Me's management is committed to supporting compliance with this Information Security Policy, fostering business growth, and increasing the value of Bit2Me to its employees, customers, shareholders and other stakeholders.

Leif Ferreira
CEO of Bit2me
